

Lesson 02: How to make an Earwire

Materials:

Wire 0.8 mm

Tools:

Wire cutters

Flat Nose pliers

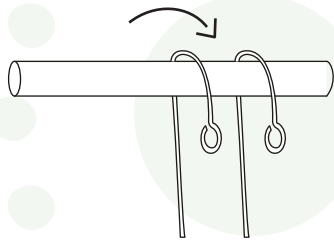

Round Nose pliers

Mandrel to form the shape

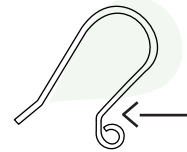

- 1 Cut 2 pieces of wire 8cm each. Using round nose pliers make a single loop to one end of each piece.

- 2 Bend the wire over the mandrel to form the shape working with both pieces of wire simultaneously.

- 3 Cut the wire in line with the loop and make a small bend away from the loop using your round nose pliers ✨

Designer's Tip!

For a perfect Earwire finish always smooth the end of the wires with a file or a wire-rounder tool.
